M.Sc. HCI candidate seeking a **6-month AI Product Management internship** (M2 internship, convention de stage)

EDUCATION

Université Paris-Saclay Sep 2025 – Present
M.Sc. in Human-Computer Interaction ARWU 2025: #13 worldwide

- Focus: HCI × AI products, intelligent interaction, VR/AR, user research and experimental design
- Relevant coursework: Design of Interactive Systems; Evaluation of Interactive Systems; Machine Learning; Mixed Reality & Tangible Interaction

Communication University of China (Project 211, Double First-Class University) Sep 2021 – Jun 2025
Bachelor's in Digital Media Technology Beijing, China

- Relevant coursework: Data Structures; Databases; Machine Learning; Human-Computer Interaction; C++ Programming

PROFESSIONAL EXPERIENCE

Tan Tan Cultural Development Co. Apr 2026 – Aug 2026
Product Intern, International Markets (Indonesia, Taiwan, Singapore; English-speaking team) Beijing, China

- Analyzed Tinder, Bumble and other social apps across matching, monetization and user feedback, and wrote localization notes on language and cultural differences.
- Supported an astrology-based matching feature: synthesized needs around astrology, interests and MBTI, and designed and tracked A/B tests comparing matching strategies.
- Supported delivery of live-room, voice-room and virtual-gift features (requirement reviews, configuration, pre-launch testing, acceptance); built recurring exposure and click-through reports with SQL and Tableau.

HuashunXin'an Technology Co. Jun 2025 – Sep 2025
Product Manager Intern Beijing, China

- For FORadar, an enterprise network-asset management product, turned customer interviews, questionnaires, focus groups and field feedback into structured requirements for IP/domain assets, asset status and tagging; produced Axure prototypes and PRDs for asset overview, search and management flows.
- Followed FORadar requirements from design to release through reviews, engineering coordination, testing and launch acceptance; supported FOEYE workflow improvements such as automated completion and asset-data linkage.

Yundao Zhizao Technology Co. Mar 2024 – Jun 2024
Product Intern Beijing, China

- Supported planning and launch of Futu 5.0 (1 new module, 14 new features); the electronic thermal-management module grew sales by 32.6% after release.
- Analyzed user activity with SQL and Tableau (monthly active users +41%, average usage time 4.7 hours); ran 1:1 customer interviews whose follow-up improvements coincided with a 47.5% drop in complaint rate.

SELECTED PROJECTS

AI-Work: Human-in-the-Loop AI Desktop Assistant | AI Agents / MCP Aug 2026 – Sep 2026

- Defined and shipped a local AI assistant (42 MCP tools) letting AI agents handle mail, files, apps and the browser on Windows under human control: read-only by default, draft-first sending, no overwrite or delete, fail-closed checks.
- Wrote the acceptance criteria and a remote-access threat model; validated 9 real-world scenarios; all 694 automated tests pass, reviewing AI-generated code (Codex, Claude Code) against each criterion. Used daily across 3 real mailboxes. github.com/peiwenZHANG-git/AI-Work

Reso: Emotion-Enriched Captioning System | HCI / Accessibility Feb 2026 – Apr 2026

- Designed a captioning system that turns speech emotion, rhythm and intensity into colored captions and real-time visual feedback; contributed to prototyping, study setup, testing and data collection.
- Combined early Wizard-of-Oz testing with an 18-participant within-subjects experiment: emotion-recognition accuracy rose from 50.9% to 63.0% (+12 pp, $p < .05$). The results shaped the next design iteration.

Arm-Swing VR Locomotion | Unity / XR Dec 2025 – Feb 2026

- Independently built arm-swing locomotion in a course-provided VR parkour scaffold, mapping controller velocity and headset direction to continuous 3D travel.
- Implemented nonlinear speed mapping, trigger clutching, damping and proximity-based fallback detection; across 3 formative runs the system reached a 94.2% average target-collection rate. I used the results to tune the parameters.

VR Assistive Device for Children with Autism | Sakura Science Program (JST), Japan Mar 2023 – Sep 2023

- Implemented Unity/C# collision and feedback logic and designed an audio-processing pipeline (dynamic range compression, low-pass filtering, reverb).

SKILLS

Product: Requirement analysis, PRDs, user research, A/B testing, prototyping (Axure, Figma)
Data & Technical: SQL, Python, Tableau, HTML/CSS
AI: LLM agents and MCP tool design; AI-assisted development and tools (Claude Code, Codex, ChatGPT, Gemini)
Languages: Chinese (native), English (B2, CET-6), French (A2)
