

Peiwen Zhang

Phone : (+33)766456908 | Email : peiwen.zhang@universite-paris-saclay.fr
Current Status : HCI M.Sc. Candidate | Seeking a 6-Month AI Product Management Internship
Available for a 6-month M2 internship with a convention de stage

EDUCATION

Université Paris-Saclay

M.Sc. in Human-Computer Interaction

Sep 2025 - Present

2025 ARWU World Ranking: #13

- Focus: HCI × AI Agents, intelligent interaction, VR/AR, user research & experimental design
- Relevant coursework: Design of Interactive Systems; Evaluation of Interactive Systems; Machine Learning; Mixed Reality & Tangible Interaction

Communication University of China 211 Double 1st-Class

Sep 2021 - Jun 2025

Bachelor's in Digital Media Technology

Beijing

- Relevant coursework: Data Structures, Databases, Machine Learning, Human-Computer Interaction, C++ Programming

PROFESSIONAL EXPERIENCE

Tan Tan Cultural Development Co.

Apr 2026 - Aug 2026

Product Intern — International Markets

Beijing

English-speaking team; supported product research and iteration for Indonesia, Taiwan, and Singapore.

- Analyzed Tinder, Bumble and other social products across matching, monetization and user feedback, translating linguistic and cultural differences across markets into localization insights.
- Supported the design and iteration of an astrology-based matching feature; synthesized needs around astrology, interests and MBTI, and designed/followed A/B tests to compare matching strategies.
- Supported live-room, voice-room and virtual-gift feature delivery, including requirement reviews, banner/redirect configuration, pre-launch testing and acceptance; used SQL and Tableau to analyze exposure and click metrics and produce recurring reports.

HuashunXin'an Technology Co.

Jun 2025 - Sep 2025

Product Manager Intern

Beijing

Focused on FORadar product iteration for enterprise network-asset management, while supporting selected FOEYE 5.0 improvements.

- Synthesized customer interviews, questionnaires, focus groups and field feedback into structured requirements for IP/domain assets, asset status and tagging; created Axure prototypes and PRDs for asset overview, search and management flows.
- Participated in requirement/prototype reviews, engineering coordination, functional testing and launch acceptance, following FORadar requirements from solution design through release; supported FOEYE workflow improvements including automated completion and asset-data linkage.

Yundao Zhizao Technology Co.

Mar 2024 - Jun 2024

Product Intern

Beijing

- Supported Futu 5.0 product planning and launch of 1 new module and 14 new features; the electronic thermal-management module achieved 32.6% sales growth after release.
- Used SQL and Tableau to analyze user activity and usage duration; during the period, average monthly active-user growth reached 41% and average usage duration increased to 4.7 hours. Conducted 1:1 customer interviews and feedback analysis; related product/service improvements were followed by a 47.5% decrease in complaint rate.

SELECTED PROJECTS

Reso — Emotion-Enriched Captioning System | HCI / Accessibility

Feb 2026 - Apr 2026

- Designed a captioning system that turns speech emotion, rhythm and intensity into colored captions and real-time visual feedback; contributed to prototype design, study setup, participant testing and data collection.
- Combined early Wizard-of-Oz testing with an 18-participant within-subjects experiment; emotion-recognition accuracy increased from 50.9% to 63.0% (+12pp, $p < .05$), informing further design iteration.

Arm-Swing VR Locomotion | Unity / XR

Dec 2025 - Feb 2026

- Independently designed and implemented arm-swing locomotion within a course-provided VR parkour scaffold, using controller velocity and HMD direction for continuous 3D navigation.
- Implemented nonlinear speed mapping, trigger clutching, damping and proximity-based fallback detection; Across 3 formative runs, the system reached a 94.2% average target-collection rate and informed subsequent parameter tuning.

Sakura Science Exchange Program (JST, Japan)

Mar 2023 - Sep 2023

- VR Assistive Device for Children with Autism: Implemented Unity/C# collision and feedback logic and designed an audio-processing pipeline using dynamic range compression, low-pass filtering and reverb.

SKILLS

Product: Requirement Analysis, PRD, User Research, A/B Testing, Prototyping (Axure, Figma)

Data & Technical: SQL, Python, Tableau, HTML/CSS

AI Tools: ChatGPT, Claude Code, Gemini, DeepSeek, Codex, Runway ML

Languages: English B2 (CET-6), French A2
