

1. interface

Frame 1: Interface Layout (Start Screen)

This frame shows the main game screen. On the top, there is the title and a timer. In the middle, there is a maze grid: black squares are walls, white squares are paths, the green square is the start, the red square is the exit, and the blue dot is the player. The player starts at the green square and must reach the red exit. At the bottom, the status bar shows the number of moves, starting at 0.

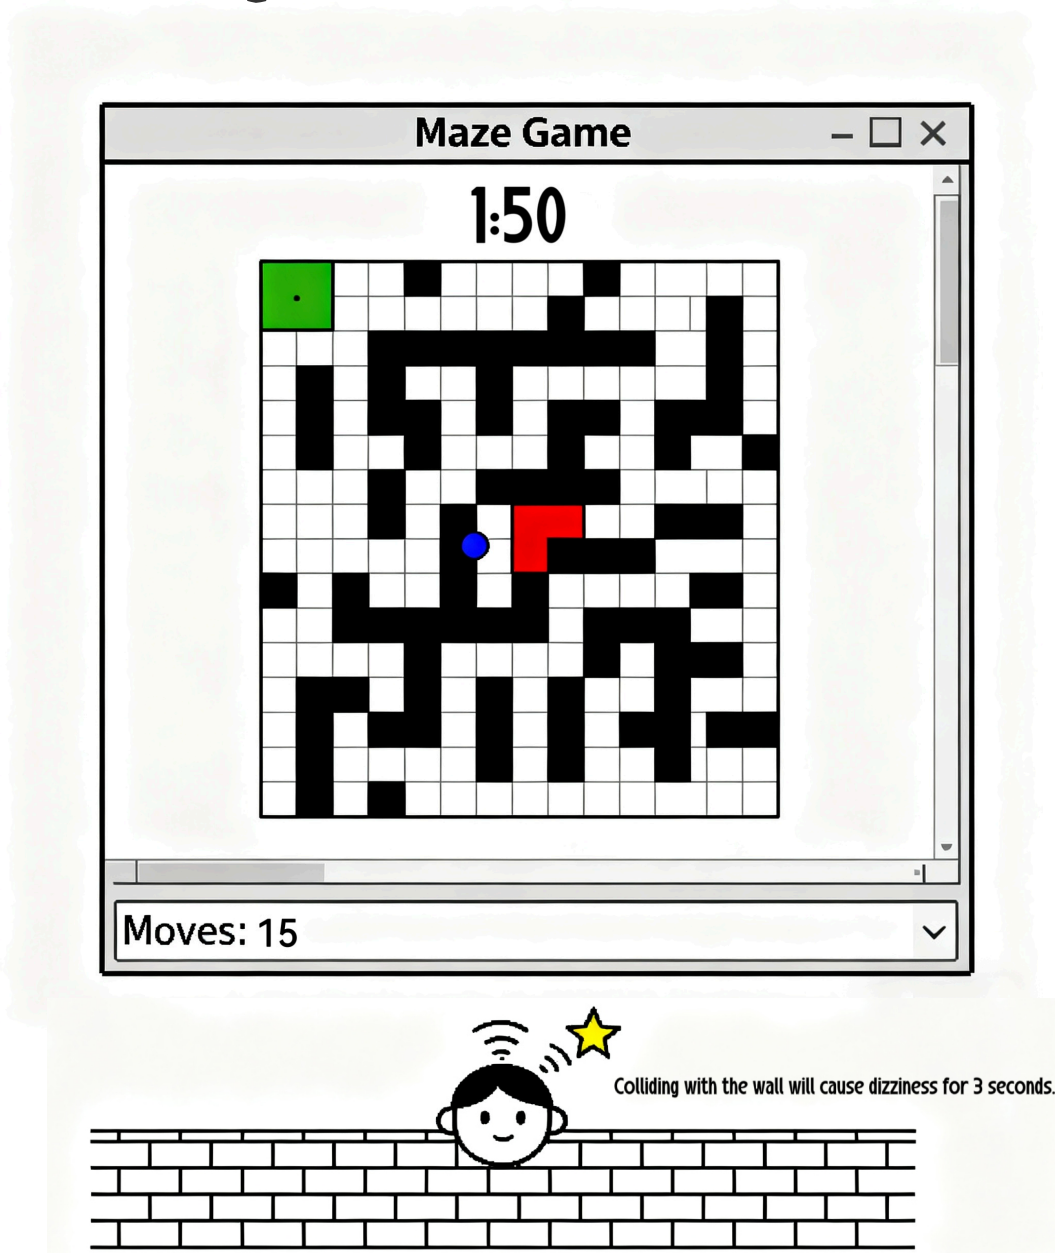

2. select level

Frame 2: Level Selection

This frame shows the level selection screen. There are 15 levels in total. A new level unlocks only after the player clears the previous one. Below each level are three stars. The number of stars depends on how fast the player finishes the level. The faster, the more stars.

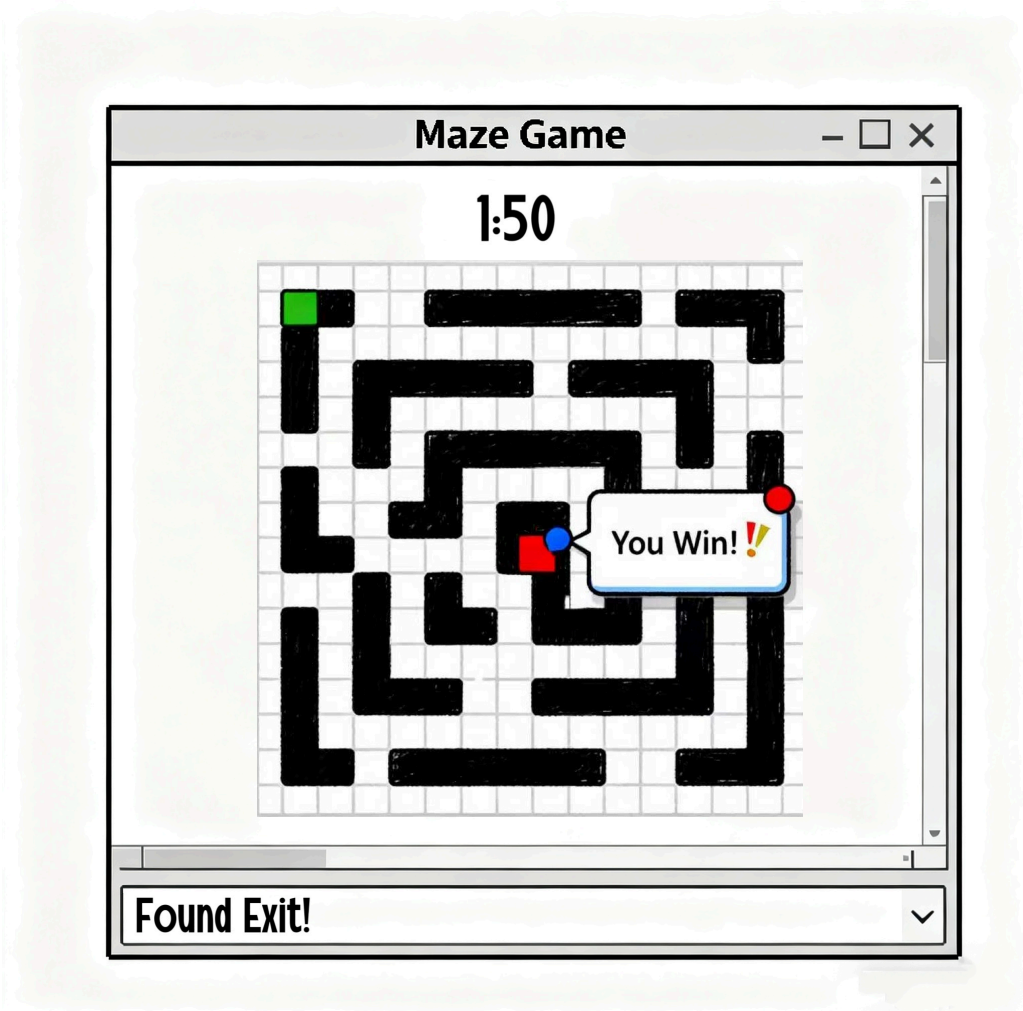

3. The game is in progress

Frame 3: Gameplay (Interaction Logic)

This frame shows the game in progress. The player uses arrow keys to move the blue dot. Each move updates the number of moves in the status bar. If the player tries to go into a wall, the character is blocked and shows a dizzy effect. The player cannot move for 3 seconds.

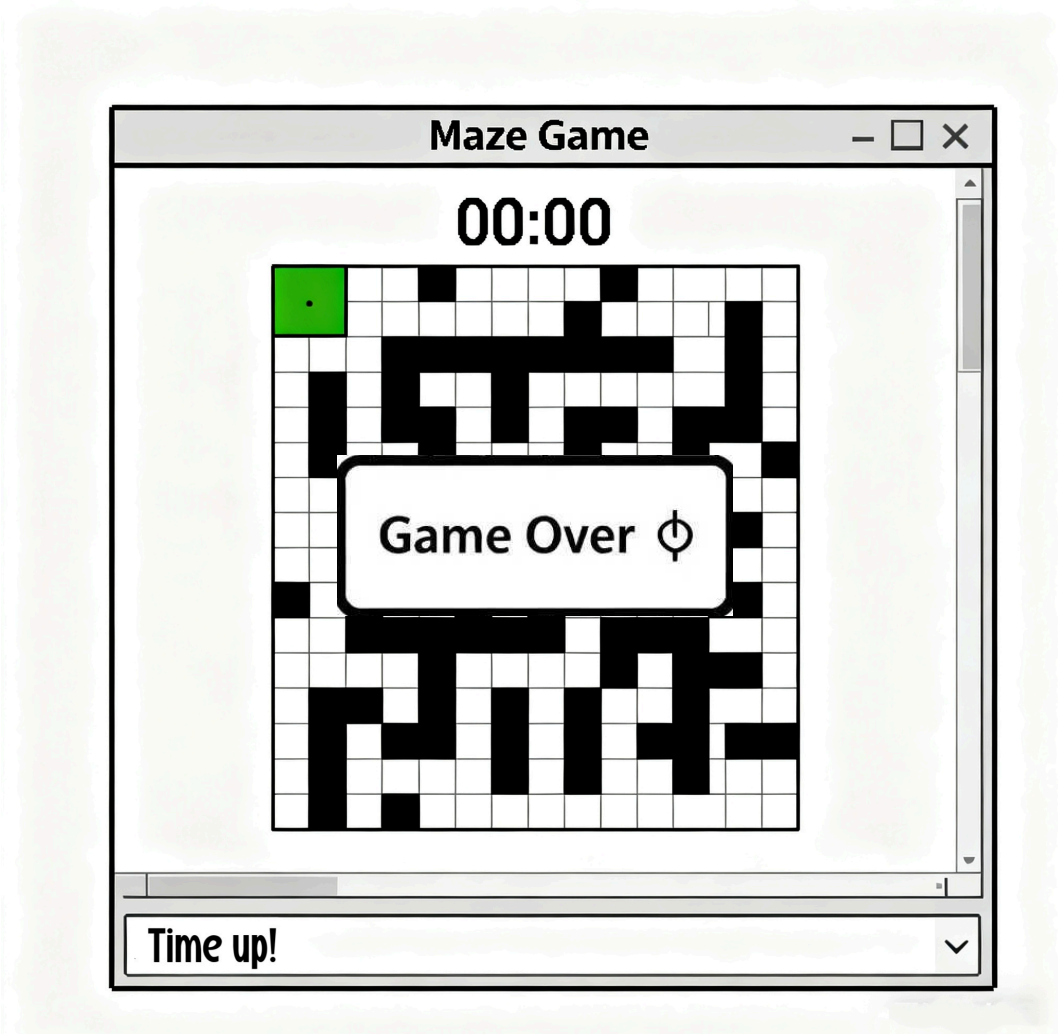

4. Game Victory

Frame 4: Victory

This frame shows the victory scene. When the player reaches the red exit, a pop-up window shows “ You Win! ” . The status bar updates to “ Found Exit! ” to show the goal is reached.

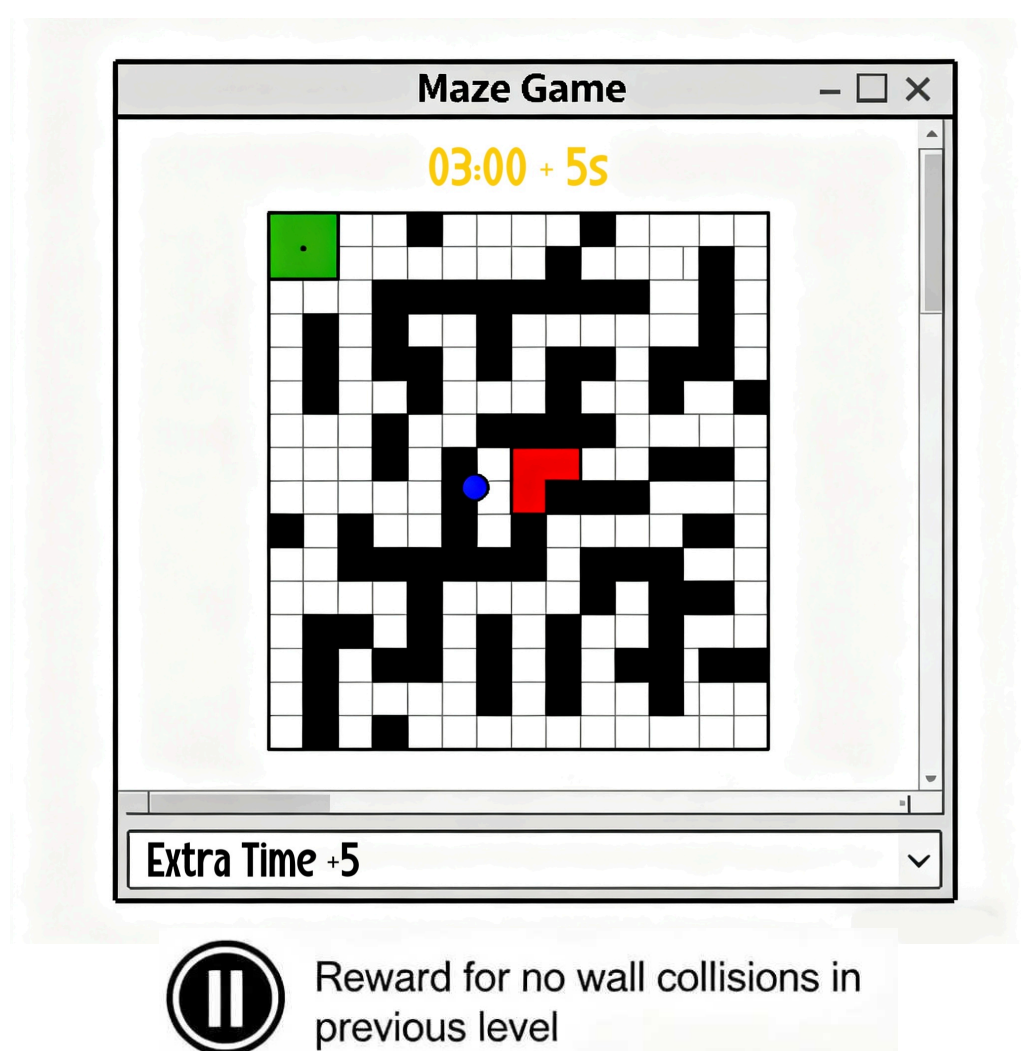

5. Game failed

Frame 5: Failure

This frame shows the failure scene. If the timer reaches zero and the player has not reached the exit, a pop-up window shows “ Game Over ” to tell the player the game is lost.

6. Power-ups

Frame 6: Extra Feature (Reward System)

This frame shows an optional reward. If the player finishes a level without hitting a wall, the next level starts with a bonus item. For example, the item can pause the timer for 3 seconds. This helps in harder levels.
